Pipkin (1964, Proc. Ent. Soc. Washington 66: 217-245) described 12 new species of *Drosophila* found breeding in flowers in Panama, but neglected to designate holotypes in her publication, although type specimens were labelled and deposited in the U.S. National Museum. The purpose of this note is formally to designate a lectotype specimen, which may be found under the corresponding type number, for each species in the National Collection.
